

# Ways to address and control the supply and demand of small arms and light weapons (SALW)

1

Regulate markets to prevent the diversion of SALW

2

Support and enforce programs for the collection and destruction of SALW

3

Effectively and efficiently manage SALW and ammunition stockpiles

Easy access to firearms is one of the main drivers of gun violence. In each country, the various uses and the trading of SALW must be strictly controlled according to national legislation and procedures that reflect obligations in international laws and commitments to international standards.
